

# NICEM, SINCE 1970

NICEM IS BORN IN 1970 AS A COMPANY FOR THE PRODUCTION OF SURFACE-FINISHING VIBRATING MACHINES FOR THE ENGINEERING FIELD. LATER, IT EXPANDED, NOT ONLY AS A REALITY, BUT ACQUIRING NEW MARKETS. BY APPLYING THE SAME SYSTEM EMPLOYED FOR THE DRYING OF THE PIECES AFTER VIBROFINISHING, THAT IS USING HEATED CORN-COB GRANULES, NICEM CREATED CUTLERY-DRYING MACHINES.

THE LINE FOR PROFESSIONAL CATERING IS THEN COMPLETED WITH THE INVENTION OF THE GLASS-DRYING MACHINES AND THE STEEL AND ALUMINUM-EQUIPMENT-DESCALING MACHINES.

TODAY NICEM BOASTS A GLOBAL MARKET WITH DISTRIBUTION POINTS IN DIFFERENT COUNTRIES.

## Drying and Polishing Innovative solutions for CUTLERY and GLASSES

Nicem offers solutions to guarantee speedy and perfect results in the drying and polishing of cutlery and glasses of any shape and dimension.

*For a perfect  
mise en place*

# CUTLERY

The cutlery, after washing, can present stains and stripes, giving a sense of dirt.

Thanks to our system, this won't happen anymore: not only it will be automatically dried and polished, but, thanks to the UV lamp, the bacteria will be cut down.

# CUTLERY-DRYING machines

Synergy between vibration and heating

Machines to speed up the drying and polishing of stainless-steel and silver cutlery. They eliminate limestone stains and lend an even shine to the cutlery. Moreover, the UV rays allow to reduce bacteria.

- ▶ Wet cutlery is inserted in the machine
- ▶ After about 35 seconds they will come out perfectly dried and polished
- ▶ Models with productivity from 2 500 to 12 000 pieces of cutlery/h

## THE POWER OF A COMPLETELY NATURAL PRODUCT

The Nicem cutlery dryer, by vibrating, makes the cutlery move on the granules, which absorbs water and polishes the cutlery without ruining its surface.

Moreover, the granules are:

- ▶ Compostable
- ▶ Wear-resistant
- ▶ Ecological

# GLASSES

The glasses, after washing, can present stains and limestone residue, giving a sense of dirt.

Moreover, the regular dishcloths often leave lint on the glass, disappointing the customer's expectations.

Thanks to our system, this won't happen anymore: the glass will be dried and polished, without applying any pressure, thus preventing any breakage risk.

# GLASS-DRYING machines

## Synergy between rotation and hot air

Machines for the drying and polishing of glasses and similar items after washing: the rotating motion of the brushes ensures evenly brilliant glasses with no limestone residue. Moreover, the hot air of the electric lateral conveyor keeps the brushes dry so that the machine can be used with no interruption.

- ▶ The wet glass is positioned first on the central brush to dry both its inside and outside.
- ▶ Then, depending on the diameter of the glass, it can be moved onto the larger brush
- ▶ Machines with productivity from 400 to 800 glasses/h

Optional: flute brush, for very thin glasses

## ENOUGH WITH HAND DRYING

The set contains 3 different types of brush, which adapt to any kind of glass.

Moreover, thanks to our brushes:

- ▶ Fast drying
- ▶ No glass breakage
- ▶ No more lint

Washable at 40°C

## TRAYS AND SIMILAR

Steel and aluminum trays and equipment, after numerous uses, are left with carbon and grease layers, which are hard to remove.

Moreover, hand descaling with scourers and abrasive sponges ruins the surfaces.

Thanks to our system, this won't happen anymore: the kitchen equipment will be left in our machines in a bath of 80°C water and our special detergent.

At the end of the process, the surfaces will be clean and degreased, without being ruined.

# DECARBONIZING machines

## Synergy between hot water and detergent of our own production

Machines for the descaling of steel and aluminum kitchen equipment. The combined action of the Nicem detergent and 80°C water allow the easy removal of scales with no mechanical intervention, so without ruining the surfaces.

- ▶ The steel and aluminum equipment are placed inside the machine with hot water and detergent
- ▶ Then, depending on the quantity of dirt, they will be left to soak until scales and residues are dissolved
- ▶ Later, they will have to be washed
- ▶ The trays will be clean and degreased without being ruined

# BENEFITS OF OUR EQUIPMENT

1

SPEEDY PERFECT  
RESULTS

2

MANPOWER SAVING

3

REDUCTION in  
CONSUMPTION COSTS
